

ALEXANDER LOCKHART NELSON

LEXINGTON VA.

$$24 = \frac{4}{\pi}$$

$$4 = \frac{2}{\pi}$$

$$\therefore 2 = \frac{a^2}{2} \left(\frac{4}{\pi} - \frac{2}{\pi} \right)$$

$$a^2 = 1$$

$$\sin \theta = \frac{2}{1}$$

$$2 + \left(\frac{4}{\pi} + \frac{2}{\pi} \right) = \frac{2}{\pi} \left(\frac{4}{\pi} + \frac{2}{\pi} \right) = 0$$

$$0 = \frac{2}{\pi} \left(\frac{4}{\pi} + \frac{2}{\pi} \right) = 0$$

$$0 = \frac{2}{\pi} \left(\frac{4}{\pi} + \frac{2}{\pi} \right) = 0$$

$$2 + \sqrt{4 + 8} = 2 + \sqrt{12}$$
