PREFACE.

Following the excellent authority of Mr. Henry Sweet in his edition of *Pastoral Care* (p. v, note 1), “I use ‘Old English’ throughout this work to denote the unmixed, inflectional stage of the English language, commonly known by the barbarous and unmeaning title of ‘Anglo-Saxon.’” I have attempted to study every occurrence of the gerund in Old English and to classify its uses. To treat the subject faithfully demanded a careful examination of all the Old English texts to which I could gain access. They include all the poetical monuments and a large proportion of the most important prose monuments so far published. A complete list of the Old English texts will be found on page 12. While it can hardly be expected that occasional omissions do not occur and that even clerical errors do not now and then find their way into this monograph, the hope is nevertheless indulged that the work has been done with sufficient accuracy and comprehensiveness to justify the results stated and to add something of a substantial, helpful, and trustworthy nature to the study of the gerund in Old English.

INTRODUCTION.

Although the gerund is widely familiar to students of languages, and despite the fact that it is used perhaps more freely in Old English than in any other language, I have been unable to find any complete treatment of the subject and have noticed that what matter I could command is discussed at length in no one of the works at hand. Another noteworthy point is the lack of uniformity which obtains in the treatment of this form by the different authors. The following quotations will serve to show (1) how meagre is the information obtainable from any published treatise and (2) the diversity of treatment :

Sievers-Cook, § 363, 1: The regular infinitive ending is -an, bindan. The inflected form of the infinitive generally ends in -anne, but older mss. have also -anne (-ene) and -onne: bindanne, bindene, bindonne. Note. In a few instances the uninflected infinitive stands for the inflected: *tō bindan* for *tō bindanne*, etc.

Sweet, Reader, p. lix. From the infinitive a gerund is formed which is a sort of dative with the preposition *tō*: *tō bindonne* for which *tō bindanne* (-enne) is found.

Sweet, Grammar, § 1183. The infinitive was originally an indeclinable abstract noun formed from the corresponding verb, so that *bindan* originally meant 'binding,' 'act of binding.' The gerund is a similarly formed noun in the dative case governed by the preposition *tō*, which always precedes it, as *hē is tō cumenne* 'he is to come' = Latin *venturus est*. It often takes the *a* of the infinitive,—*tō cumanne*.

Bright, Reader, p. 196. The gerund (the dative of the infinitive with the preposition *tō*) expresses the purpose of motion. . . . The gerund clause is here the logical subject of an impersonal verb; a final clause may take the place of this construction.

Maetzner, Vol. I, page 419. Der Infinitiv mit *tō* drückt hier im Zusammenhange mit dem vorangehenden Verb die Thätigkeit aus, zu welcher das Subjekt hinneigt, hinstrebt, oder bestimmt ist wo das Altenglische dem Infinitiv auch *for* beigab: *Hwat ham beo to don . . . Hwet is us to donne.*

Maetzner, Vol. III, page 20. Der auf ein verhältnissmässig kleines Gebeit beschränkte reine Infinitiv ist schon frühe viel fach dem von der Präposition *to* begleiteten Infinitiv gewichen. Bereits im Gothischen trat die entsprechende Präposition *du* im Ahd., Ags., Alts., und Altfrisischen *zi*, *zou*, *tō* etc. vor den Infinitiv. Der Gothe fügte *zu du* den unveränderten, die übrigen genannten Mundarten den nach Art eines Substantiv flektierten Inf., und so erscheint in Ags. der Inf. in einer Dativform, *tō tellanne*, wo bei das *a* der Sylbe *an* auch einen *e* weicht; *tō cumenne*, und das *nn* sich öfter vereinfacht, *tō habbane*, u. s. w.

Maetzner, Vol. III, page 21. Mit Ausnahme der in vorigen Abschnitte aufgeführten Fälle beherrscht jetzt der präpositionale Infinitiv den ganzen Bereich dieser Verbalform. Rom. Inf. mit *ð* und *de* haben sich wie reine Inf. dieser Form gefügt und die Zahl der mit *tō* eingeführten wesentlich vermehrt. Als grammatisches wie als logisches Subjekt des Satzes ist ihm ein weites Gebeit eingeraumt. Als grammatisches Subjekt steht er, trotz der Partikel *to*, einem abstrakten Substantiv gleich; als logisches Subjekt erhält er in seiner Anlehnung an ein grammatisches den Anschein einer untergeordneten Bestimmung in Satze.

Maetzner, Vol. III, page 22. Die vielseitige Verwendung des Infinitives mit *to* im obj. abv. I Verhältnisse, welcher in der jüngeren Sprache einen immer weiteren Umfang gewinnt, nach ihren Arten zu scheiden, hat darum Schwierigkeit, weil dieser Infinitiv sich theils enge an einen Begriff im Satze, an ein Verb, ein Adjektiv oder ein Substantiv anschliesst, theils in locherer Beziehung zu einem Satzgliede oder Satze steht, und beide Beziehungsweisen oft nahe an einander grenzen oder in einander übergehen.

Maetzner, Vol. III, p. 44. Mit dem Substantiv verbindet sich der präpositionale Infinitiv nach verschiedenen Rücksichten. a) Sehr gelaufig ist seine Verwendung in der Bedeutung eines Gen. des lat. Gerundiums, welcher sich dem Gerundium mit *ad* annähert, besonders nach *abstracten* Subst. darunter auch Zeitbestimmungen.

Maetzner, Vol. II, p. 42. Der Infinitiv ist selten als prädikative Ergänzungen zu betrachten. Entschieden ist dies der Fall in Sätzen folgender Art. *But talking is not always to converse.* Hier ist der prädikative Infinitiv einem abstrakten Hauptworte gleich zu achten.

Anders verhalten sich Infinitiv, wie sie oben bei den Verben des Scheinens und bei Passiven als Umschreibungen der prädiktiven Bestimmungen durch das Verb 'be' mit eben denselben Bestimmungen angeführt sind. Sie sprechen das Sein derselben noch besonders aus, und weisen auf einen entwickelten Nebensatz hin, dessen prädikative Ergänzungen eben jene Nennwörter sind. Die Natur der Umschreibung wird klar durch Sätze, in denen der Infinitiv des Präteritum vorkommt. Andere Infinitiv nach intransitiven und passiven Zeitwörtern entfernen sich noch weiter von der eigentlichen prädiktiven Ergänzung. Insofern aber solche Infinitiv zum Theil in Participleformen verwandelt angesehen werden.

From the foregoing we may formulate the following definition of a Gerund (see especially Sweet, Gram., § 1183, Bright, Reader, p. 196, Maetzner, Vol. III, p. 20): The gerund is an abstract noun in the dative case governed by the preposition 'tō' which always precedes it, is formed from the corresponding verb, and retains the nature of the verb as to both modifier and case. It may sometimes have the preposition 'a' instead of 'tō.'

A discussion of the Gerund in Old English is either entirely omitted from the grammars or is treated in only the vaguest and most general terms, while the Latin gerund demands careful treatment at the hands of every Latin grammarian.

II.—USES OF THE GERUND IN OLD ENGLISH.

The aim of this investigation is to discover the uses of the Old English Gerund. For the purposes of this study nearly all of the monuments of the Old English period have been carefully read and a few of the Latin originals. I found that to examine every instance of the original for which an O. E. Gerund is found or to give the various translations of the gerund in the original would increase this study beyond the limits which were set for it, and hence I have with few departures carefully refrained from a study of either of the two subjects. It is safe to say that by far the main uses of the Gerund are found in the texts which have been read.

The uses of the Gerund in Old English correspond to some extent to the uses of the Gerund and Supine in Latin and partly to the simple infinitive. They will be treated only briefly as the statistical part of this study will furnish the proof for what is here stated.

1. *Purpose.* The Gerund as a means for expressing purpose is in frequent use chiefly after verbs of motion or verbs implying motion. It is used in every work consulted with the single exception of Aelfr. G. u. G. Examples are so numerous that there is need of no quotation here as the table of statistics is convincing on this point.

Note. The Gerund is used parallel with the subjunctive to express purpose. The only example I have recorded is Gospels 522.47 ne com ic . . . to démenne ac ðaet ic gehæle . . .

2. *Adjective Complement.* The Gerund is used in each of the works except Aelfr. G. u. G. as the complement of an adjective. This Gerund follows such a wide diversity of adjectives that it is impossible to give any satisfactory classification of the adjectives which I have noted in this study. It is, however, proper to call more than passing attention to the frequency with which it is used to show 'in what respect,' 'in accordance with what,' 'from what point of view' a quality or assertion is limited. Examples of the adjective complement are so frequent that I shall quote only enough to illustrate the last named feature. Bede 144.18 onders-

lic on to seonne; Greg. 90.13 mihtig . . . to tyhlanne; Chron. 326.28 earfoðlic . . . to atellanne; Bl. Hom. 223.22 mihtig . . . to hælenne. Compare the ablative of the supine in Latin *mira-bile dictu, facile factu*.

Note. The Gerund is used parallel with the simple infinitive as the complement of an adjective in Aelfr. L. S. 138.353 *hi wurðe waeron*. . . . to þrowigenne and *becuman to his halgan*.

3. *Noun Complement.* The Gerund is found as a noun complement in every work except Bl. Hom. The Gerund may be used with any noun of incomplete meaning.

Note. The Gerund is used parallel with the simple infinitive as the complement of a noun in Gosp. 276.72 *mild-heortnesse to wyrcanne* . . . and *gemunan his halegan cýðnesse*. So, 276.79. I have recorded no other examples.

4. *Complement of Verb.* A large number of verbs, both active and passive, transitive and intransitive, take a Gerund to complete the meaning of the verb. This use of the Gerund is very common and is found in each of the texts. In some instances it is hard to decide whether this use is an objective complement or an adverbial complement so nearly do these uses coincide. With transitives and passives the Gerund is usually nominal in nature while with many actives it is adverbial.

Note. The Gerund is used parallel with the simple infinitive as the complement of a verb in Aelfr. de v. et n. Test. 107.3 *þóhte hî tô áhebbanne* . . . and *gesetlan*. . . .

5. *Logical Subject.* The Gerund is used as the logical subject of an impersonal verb in every text save Bl. Hom. and Aelfr. G. u. G. While this is not one of the most extensive uses it is too well recognized in languages to need extended comment. One example shall suffice, Aelfr. L. S. 240.30 *us gedafenað* . . . to campigenne.

6. *Duty and Necessity in Active Sense.* The use of the Gerund with the verb 'be' to express duty or necessity or permission in an active significance is found in all the text except Oros., Boeth., and Aelfr. de v. et n. Test. In this use the verb 'be' is commonly accompanied by a dative. Examples, Aelfr. Hom. 110.6 *us is eae to witenne*, Aelfr. Hom. 502.26 *hwaet him be ðam to donne waere*. This seems to be a kind of logical subject.

7. *Duty and Necessity in Passive Sense.* Every text except

Aelfr. de v. et n. Test. has the Gerund with the verb 'be' to express duty or necessity in a passive sense. This use is closely akin to the foregoing but differs from it in that it may follow a personal subject (Aelfr. G. u. G. 144.11, *hē is to lufigenne*; Wulf. Hom. 73.8, *se is to lufjanne*).

8. *In Passive Sense.* In only four of the works have I recorded the use of the Gerund in a passive sense. The works are Greg., Chron., Aelfr. Hom., Aelfr. L. S. In this use it frequently follows verbs of 'motion' and as such expresses purpose. Examples, Aelfr. L. S. 418.85 *leddon ðone halgan to beheafdigenne*; Aelfr. Hom. 46.35 *hine . . . gelaeddona to staenanne*. It is often difficult to decide whether this use may not with equal or even greater propriety be assigned to the purpose class discussed above. The balance has tilted in favor now of one use, now in favor of the other. That *both* uses exist is an indisputable fact.

9. *Prepositional Phrase.* Bede 82.22 furnishes the solitary example of this use; *oððe be cirican ingonge, oððe to onfonne . . . Cristes lichoman*.

10. *Predicate of Sentence.* The only instance of the Gerund as a pure sentence-predicate is in poems 325.4 *to findanne naes to oðfeorr-ganne* and *to witanne naes to oðwyrceanne* and *to lufianne naes to oðlaedanne*.

11. *As Translations for the Latin.* It is unfortunate that this use of the Gerund is limited in discussion by reason of the fact that the original has not been accessible except for Aelfr. de v. et n. Test., and Aelfr. G. u. G. I believe, however, that a more extensive study of the originals of the other works (wherever originals exist) will not materially change or affect the value of the following deductions, for the manifest reason that almost every possible use of the Gerund has been made in these translations.

- (a) Infinitive Complement of a Verb, eight instances.
- (b) Ut and Subjunctive, four instances.
- (c) Simple Gerundive, eleven instances.
- (d) Genitive of the Gerund as Complement of a Noun, one instance.
- (e) Ad and the Gerund or Gerundive, fourteen instances.
- (f) Future Participle in -ūrus, one instance.

References to the examples which illustrate these uses will be found in the table of statistics.

III.—RESULTS.

I have studied eighteen hundred and twenty-four instances of the Gerund. While I cannot hope to have gathered every occurrence of its use, I believe the number omitted will not vitiate the value of the results obtained. Now and then the same example is quoted under two heads to either of which it easily belongs; and again an example is given to one class when it might with almost equal propriety be assigned to another. There is in fact, in many instances, no strong line of demarkation which clearly sets an example off to a definite class.

It is to be regretted that (1) a study of the *origin* of the Gerund in Old English and the other Teutonic languages—which would determine whether it is a native construction or a borrowed one—and (2) a more complete study of its use as a *means of translation* for Latin constructions does not form a part of this paper, but this would have extended the work far beyond the limits of this investigation.

I give here what I believe to be the results of the foregoing study:

1. The Gerund in Old English is an abstract noun in the dative case, derived from a verb and retaining its verbal modifiers.
2. It commonly has the preposition 'to' before it but may occasionally have 'a' instead of 'to,' and in one instance it is accompanied by no preposition.
3. The dative is formed by adding *-ne* to the infinitive thus making the Gerundial ending commonly *-anne*; but instead of this ending may be found *-enne*, *-ene*, *-onne* and occasionally the uninflected infinitive takes the place of the dative.
4. As a noun the Gerund is used in subjective, predicative, appositive, and objective relations.
5. Adjectively the Gerund appears as an attributive or a predicative complement of a substantive.
6. The Gerund occurs adverbially after verbs, adjectives, and

adverbs to point out intent, purpose, object, consequence and the like.

7. With the verb 'be' the Gerund is especially common to express duty, obligation, necessity, permission, possibility, and expectation, in both active and passive senses.

8. It completes or defines the meaning of verbs, adjectives (adverbs), and nouns.

9. While the Gerund is active in form it not infrequently has a passive meaning. This use occurs chiefly after verbs of motion and generally expresses the purpose of the motion.

10. The Gerund is found parallel with the simple infinitive, with the subjunctive clause, and with *sculan bēon* and a verb. As such it lends variety of expression to the style.

11. As a convenient means of translating Latin into Old English the Gerund may be used for (a) the complementary infinitive, (b) *ut* and the subjunctive, (c) simple gerundive, (d) genitive of Gerund as noun complement, (e) *ad* and the Gerund or gerundive, and (f) the future participle in *-ūrus*.

Biographical.

I was born near Central Plains, Virginia, April seventeenth, 1869. My early schooling was at my home or in the country schools. In 1887 I went to Bingham School (at that time near Mebane, now at Ashville), North Carolina, where I remained for three years and completed the regular classical course with the grade of First Distinction. Here under the guidance of my excellent teacher of English, Professor W. L. Weber, I first formed a taste for the subject. From Bingham School I went to Washington and Lee University where I spent two years. During the succeeding two years my time was pleasantly spent in teaching in the Cove Academy, Covesville, Virginia. At the end of the second year I resumed my studies at Washington and Lee and remained there for five years. From this institution I gained successively the bachelor's, the master's, and the doctor's degrees. Being awarded the Mapleson Scholarship in 1895, I became that fall Instructor in English and Modern Languages, a position which I continued to fill for the remaining four years of my university course. While in this position I edited and published a French classic. Leaving the University in 1899 I went to the associate principalship of the Donald Fraser School for Boys at Decatur, Georgia. From the Donald Fraser I was invited to become the first principal of the newly established Presbyterian Institute at Blackshear, Georgia, where I am now engaged in work.

It is a peculiarly pleasant duty to make grateful acknowledgment for the many courtesies which I received at the hands of all my faithful instructors, but I cannot refrain from mentioning the names of Doctors Currell, White and Harrison (now of the University of Virginia), without whose inspiration and encouragement my work would have been much more difficult or altogether impossible. I must also make grateful mention of the courtesies shown me in the loan of books by Dr. Harrison, Dr. Currell, Dr. J. D. M. Armistead of Lynchburg, Virginia, and by the Johns Hopkins University.
